About The Odin Project

The Odin Project is one of those "What I wish I had when I was learning" resources. Not everyone has access to a computer science education or the funds to attend an intensive coding school and neither of those is right for everyone anyway. This project is designed to fill in the gap for people who are trying to hack it on their own but still want a high quality education.

Our Beliefs

Education should be free and accessible

This curriculum itself is free and we tried to link to resources that are themselves free so anyone in the world can use them.

You learn best by actually building

The Odin Project curriculum is full of projects that will help you build a strong portfolio of work on Github to fill out your resume.

Motivation is fueled by working with others

We're committed to connecting students together so they can stay motivated and learn faster.

Open source is best

Our curriculum and website are available on Github and we encourage students to actually contribute to the project itself!

Origin of The Odin Project

The Odin Project provides a free open source coding curriculum that can be
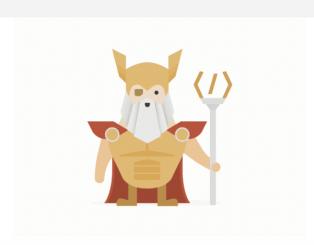

Open Source

The Odin Project provides a free open source coding curriculum that can be taken entirely online. Since it's inception, it has helped many students get hired as developers and has assisted countless others learn enough programming to work on their own personal projects.

Founded in 2013 by Erik Trautman, The Odin Project is now sponsored by Thinkful, a new type of technology school that provides 1-on-1 learning through its network of industry experts, hiring partners, and online platform to deliver a structured and flexible education. The Odin Project is maintained and continually improved by a team of volunteers, many of whom learned to code with us.

This website and the curriculum it hosts are completely open source. That means anyone can work on new features or fix existing bugs on the website. This also extends to the curriculum itself, anyone can work on new lessons, add new resources and improve existing lessons.

The Odin project would not be possible without the hard work of contributors from all across the world. If you're interested in helping us make Odin better please find out how to contribute.
